

Every organization needs a standardized maintenance management system that can help manage production instabilities, malfunctioning machines, or complete breakdowns to avoid potential pauses in the production, wholly or partially

Qualityze Maintenance Management helps you manage, track, and control the critical assets of the company. Our robust and configurable solution helps streamline scheduling, executing, and documenting regular and timely Maintenance activities. Having a well-scheduled maintenance program in place ensures consistent production, reduced downtime, and increased efficiency. You can increase the life of the equipment used in your organization while maintaining employee safety with regular maintenance of the spare parts. Our solution enables you to:

Create Criteria Library

Qualityze Maintenance Management Solution helps create a criteria library for different attributes and variables. For each attribute and variable, you can specify details like Criteria Name, Measurement values, Tolerance (-), Tolerance (+).

Once you specify the standard values for attributes and variables, Qualityze Maintenance Management Solution helps monitor and control the spare parts' tolerance level. The system tracks the spare part that is Out of Tolerance, based on the specified standard criteria. It helps you to keep a check on equipment that needs to undergo maintenance on an urgent basis.

You'll be able to reduce the quality costs by defining the Maintenance criteria to maintain the asset's life.

Create Spare Parts Library

Qualityze Maintenance Management Solution enables you to create a profile of different spare parts and assets used in the organization. You can document all the critical details, including Spare Part Name, Part, Quantity on Hand, Threshold Quantity, and the status. You can also record the other desired details by configuring new data fields. Qualityze is a fully configurable solution suitable for your business-specific needs.

Setup Maintenance Schedule

When Maintenance is due, your quality teams will automatically receive notifications and alerts on regular intervals to avoid any catastrophic event due to irregular

maintenance. Qualityze Maintenance Management Solution enables you to set Maintenance schedules well-in-advance for Yearly, Quarterly, Monthly, Weekly, Daily maintenance. You can assign the maintenance schedules to a selected Vendor, Internal team member, or both.

The intuitive dashboards and email notifications of Qualityze provides your team with quick insights on incoming maintenance activities. Our solution simplifies the documentation part by allowing you to save Maintenance records for reference. Inspectors can quickly review the equipment Maintenance records to track the regularity of the Maintenance programs.

Define Asset Specific Maintenance Criteria

Qualityze enables you to define Asset Specific Maintenance Criteria wherein you can specify the standard measurements, units, and tolerance level.

By defining asset-specific Maintenance criteria, you can keep a check on the functioning of spare parts to avoid any potential nonconformity.

Conduct Scheduled or Unscheduled (Emergency) Calibration

Use the system generated scheduled maintenance alerts to generate a scheduled maintenance record or initiate a maintenance record on an ad-hoc basis for unscheduled (emergency) maintenance.

Using the predefined criteria at the asset level will allow you to inspect, measure, and maintain the spare parts at hand. After performing the maintenance activity and tracking spare parts usages, you can take further actions to create and document any potential nonconformity that may have occurred.

The closure activity will reflect the details such as Time took to Complete, Cost Incurred, Date Returned to Use, Asset Status, Maintenance Result, and much more.

Print Maintenance Certificate

After the successful maintenance activity, you can print a maintenance certificate/label to show maintenance status, maintenance performed date, and due date of maintenance, demonstrating a control to guarantee that only maintained spare parts are used.

Integrate with Existing Quality Systems

You can directly create an NC with Qualityze Maintenance Management Solution on detecting the equipment that cannot be maintained. Our solution allows for seamless integration with other quality systems to make quality management effective and efficient. You can quickly collect all the information about the equipment that cannot be maintained and make better decisions.

Qualityze Maintenance Management Solution integrates with Qualityze Nonconformance Management to streamline Maintenance schedules for your critical assets. It ensures that all the spare parts are regularly maintained and prevent catastrophic events due to equipment failures.

Qualityze® - The Enterprise Quality & Compliance Management Platform

Qualityze EQMS Suite comprises robust quality management modules, engineered to optimize quality for every industry. Built on a compliance-ready cloud platform, i.e., Salesforce, Qualityze helps create a closed-loop quality process with seamless integration capabilities. You can leverage electronic signatures, audit trails, validation packs, and flexible reporting to achieve quality compliance. Whether you want to manage single-site or multi-site maintenance programs, Qualityze helps standardize Maintenance programs to ensure flawless functioning of every equipment.

Qualityze Maintenance Management Solution simplifies the maintenance tasks – be it Corrective Maintenance, Preventive Maintenance, Risk-Based Maintenance, Reliability-Based Maintenance, or Condition-Based Maintenance. It helps you manage all the maintenance tasks quite well that makes you stand apart from your competitors, giving you a competitive advantage.

Qualityze Maintenance Management Software is a robust solution to increase organizational productivity while coping with regulatory requirements.

Capabilities	Benefits
Centralized Maintenance Records Database	Track Maintenance records in a validated system to provide the detail and history required in a regulatory environment.
Integration Capabilities	Integrate the Maintenance management system with nonconformance reporting and tracking software for quick and efficient actions on equipment that cannot be maintained further.
Spare Part Profiles	Provide more flexibility to your employees for managing calibration through centralized asset profiles.
Criteria Library	Define criteria for variable and attributes against which you want to measure the need of maintenance.
Asset Specific Maintenance Criteria	Specify the standard measurements and tolerance level.
Industry Best Practices	Manage the equipment Maintenance using industry proven processes to check the degree of exactness of every asset.
Tolerance Assessment	Assess the equipment that are Out of Tolerance and evaluate the need for creating a NC.
Threshold Quantity	Notifies maintenance management team about the available quantity of spare parts.

Qualityze Maintenance Management Solution Ensuring ISO 9001 & Regulatory Compliance

Capabilities	Benefits
Electronic or Digital Signature	An electronic signature for every action and decisions performed. Includes the name of the signatory, the date and time of signature execution.
Dashboards & Reports	Users can create any number of Dashboards and reports.
Iconic Color Code Managed Workflow Process	The color-coded icons quickly help the user know "WHERE AM I" in the managed workflow process.
Proactive Input Validation	Proactive input validation helps guide the user while reducing errors on later steps.
File Attachments	Multiple files of any type can be attached to a Maintenance record.
Automated Dynamic Workflows	Dynamic workflow configuration allows user to create variations of workflow for every Maintenance program.
Follow or Subscribe	Follow feature allows user to keep track on progress of the Maintenance Schedule that they are interested in, even though they do not own or have any active Maintenance task. The system will create an alert on the dashboard anytime the Maintenance schedules that they are following is updated.
Automated Dynamic Workflows	Dynamic workflow configuration allows user to create variations of workflow for every Audit
Follow or subscribe to your important quality records	Allows user to create a 'sticky note' to the self in the portal. Use it as a personal reminder or to remind yourself of work that needs to be done for a Maintenance and the related tasks.
Notes for important reminders	Allows user to create a 'sticky note' to the self in the portal. Use it as a personal reminder or to remind yourself of work that needs to be done for an Audit Record or a specific task.
Alerts & Notifications	A content change notification service that provides information in the homepage any time any type of updates occurs to a Maintenance records that the user own.
Portal Page	Dynamic portal page provides a quick overview of all the tasks for a user to complete. Approval, Task Completion, Alerts, Notes, Followed Maintenance Schedules and Maintenance schedules that the user owns are all displayed in the portal page.
Task List Approval	With task list approval, approver will have the capability to approve right from the task list without having to go into the detail of the Maintenance record.
Outlook Email Approval	With this feature, approver do not have to sign into the application to approve. User can simply reply back with words like 'APPROVE', 'APPROVED', 'YES', 'REJECT', 'REJECTED', or 'NO' as a response.
Chronology	Every Maintenance record has a timeline of an event which tells the user what happened when. In other word a very high-level audit trail that allows user to quickly understand the sequence of activities that occurred in the life cycle of Maintenance record.
